Newly submitted claims 26-41 are directed to an invention that is independent or distinct from the invention originally claimed for the following reasons: The originally presented invention are directed to system with a local authorization table where authorization data was stored locally and used to determine if a packet was to be forwarded to an ISP networks, classified in class 726, subclass 12, not requiring authentication clients and useful for determining locally if packets should be forwarded. The newly submitted claims are directed to a system with authentication clients, not requiring a local authorization table, classified in class 713, subclass 155, and useful in centralizing access control policy management.

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claims 26-41 are withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.
